^{*} Unable to show numbers less than 5 in order to protect patient confidentiality. Due to reporting delays, all numbers are provisional.

Note: Objectives identified in *Arizona 2000: Plan for a Healthy Tomorrow* are set in boldface. Totals for Arizona may include cases with unknown county of residence. Beginning with the 2000 data year, mortality from influenza and pneumonia is classified according to Tenth Revision of the International Classification of Diseases (ICD-10). The comparability ratio (a measure of comparison between ICD-10 and ICD-9) for influenza and pneumonia is 0.6892, a decrease of about 30 percent due to ICD-10. For consistency, the the-adjusted mortality rate for influenza and pneumonia in this section uses the 1940 standard population and it should not be compared with rates in sections 2B and 5E based on the 2000 standard.
